

Z334-SPNG

This combination of springs will give the most even shifter feel for side to side movements
It also has a higher spring rate compared to stock which gives a stiffer feel

This combination of springs will give the stiffest feel
However, there will be a slightly uneven shifter feel for side to side movements

Moving to the left side (Gears 1/2) and returning to the middle (Gears 3/4) become much stiffer
This is at the cost of the stiffness when moving to the right (Gears 5/6/R)

**** not recommended to use a 'THICKER' spring and a 'THINNER' spring together as they will result in extremely uneven spring rates and terrible shifter feel****
